

NATHAN ALLAN
GLASS STUDIOS INC

Restrictions in the combined processes of casting/bending/tempering have limited companies to exclude any type of bent cast glass for potential projects.

In 2005, Nathan Allan developed a system of technical parameters that allows for the successful production of bent and cast tempered glass .

Our most recent bent glass project is in the Hyatt Classic in Palo Alto, CA, a private and exclusive residency.

Large panels of 1/2" bent cast glass, 6'0 x 8'0, are installed on bronze tubes (also supplied by Nathan Allan). Multiple textures are incorporated into the design, with prismatic accents of Dichroic Glass.

This project displays our ability to provide large cast panels in a bent form, that will meet and exceed all safety tempering requirements.
