

## Press Release: **Gemstones (Feb 2007)**

Nathan Allan Glass Studios Inc is excited to introduce another unique and spectacular glass product, "Gemstones." Something new, something different, Gemstone colors glitter on Nathan Allan's original Freeform textures. Gemstone colors are a mixture of Nathan Allan Clear Finish Colors with pearlescent frosting. Ideal for applications where back lighting is difficult, the pearlescent sheen is best achieved with front lighting. Choose colors from our standard inventory, or provide a custom color of your choice. Gemstone colors can be applied to any of our Freeform patterns or 55 standard textures (Gemstone colors display most effectively on Freeform textures.)

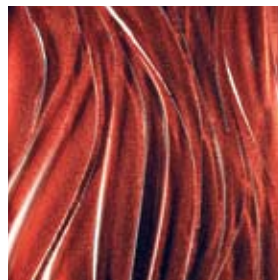

Applications include cladding columns, wall coverings, and feature walls. A photograph says a thousand words, but no words describe the real thing. In a very recent presentation tour in Las Vegas, of all our new products presented, the Gemstone color samples received the largest "Wow" factor.
