

## Press Release: Glass Flooring

Designed with our trademark "Glass Sandpaper"<sup>1</sup> safety finish on the walking surface, Glass Flooring can be produced in tiles as small as 12" x 12" or in sheets as large as 7'0 x 12'0. Typically, Glass Flooring will be produced using 1/2" thick glass, which will be safety tempered. Each panel will have our Sandstone texture on the #2 surface, which provides a subtle texture in combination with the new colors. Six introductory colors are currently being offered, with custom color matching available. Minimum order requirement of 100 square feet of material.

<sup>1</sup>Glass Sandpaper has been independently tested in laboratories, and has produced extremely high slip-coefficient results for both wet and dry conditions.

### SPECIFICATIONS

- SHEET SIZES** from 1'0 x 1'0 up to 7'0 x 12'0
- THICKNESS** 1/2" thick, tempered safety glass is recommended
- COLORS** 6 standard colors; custom color matching is available
- INSTALLATION** water based adhesives, such as tile thinset
- CLEANING** from foam mops to commercial scrubbing carts
- OPTIONS** colored Glass Flooring panels can also be used in vertical applications such as column cladding, backbars, and fascia material (in these applications, the Glass Sandpaper would normally be removed)

Please order your sample of Glass Flooring to see it for your own eyes, as photos can't truly capture the glitter of the metallic finish.

FL Bordeaux

FL Marine Blue
