HONEYCOMB

ARCHITECTURAL DECORATIVE GLASS

PRODUCT INFORMATION

Imagine giant honeycombs that appear to float like pillowy connected clouds far in the distance. As you get closer, their undulating shape takes on delicate yet bold angles and you realize the surface isn't penetrable, soft or malleable at all — it is glass, only in an entirely new, and one-of-a-kind design incarnation.

Honeycomb Glass was created in collaboration by the world's leading cast glass manufacturer, **Nathan Allan Glass Studios** and celebrated interior designer/fashion model **MaryAnn Meppelink**. As one of the latest innovative products in the company's popular Convex Series, Honeycomb's deep cells/pockets add airy strength, a first in the A&D industry.

Application : Cladding, Partitions, Walls, Balustrades

Collection/Series : Josiah J, Convex

Glass Type : Clear / Low Iron

Finishes : Colored / Frosted

Color : Lucent, Gemstone, Metallic, Faux

Max. Size : Panels up to 5'0 x 10'0 (1500x 3000mm)

Thickness : 1/2" or 3/4" (12mm or 19mm)

Safety : Annealed, Laminated

"Honeycomb glass is a unique, exclusive, hand-crafted design unlike any cast glass product ever designed or viewed in the glass industry," explains MaryAnn.

Nathan Allan's new **Honeycomb** product is made of 'cells' that create an innovative system of strong yet elegantly refined panels that can be used in **partitions, feature walls, facades and cladding.**

Lead production designer Greg Carter says *"it has the deepest texture of any glass Nathan Allan has ever produced and required brand new mold designs and original melting programs in our kilns, to successfully form the glass".*

UNIQUE, EXCLUSIVE, AND UNLIKE ANY GLASS PRODUCT EVER DESIGNED

Designers and architects can also choose different opacities such as the clear glass version that allows light to refract through the glass forming a deep bubbly appearance, or the white-metallic colored option. Whether used in exterior or interior applications, the new product will allow, explains Barry Allan, director Nathan Allan Glass Studios, *"large amounts of light to travel through it or it can provide privacy with opaque or frosted finishes."*

Honeycomb glass will be a dramatic and bold choice for a feature wall in a lobby entrance where first impressions create lifelong memories. Despite the grand scale — **each cell is 15 inches wide by 15 inches high (380mm x 380mm)**— Nathan Allan can produce Honeycomb glass in large **Annealed panels and shatter-resistant laminated safety panels.**
