

MOLTEN THICK GLASS INDIGO

PRODUCT INFORMATION

Molten Thick Glass is most commonly used in glass countertop applications. With a standard 1.5" (38mm) thickness, this thick, heavy glass is intriguing in design, and durable in function. Detailed textures are formed into the bottom surface while air bubbles float effortlessly throughout the glass. Integral color flows throughout the glass, adding a vibrant visual appearance. As the colors are integral, they are durable and do not wear off or fade. This unique Molten Thick glass is initially being offered in 5 color selections, with many more to be introduced soon.

MAXIMUM PANEL SIZE

Annealed

Panel size depends on glass thickness. As thickness increases, the size may decrease. Please provide a thickness and texture to receive a maximum panel size.

Privacy Finishes

Frosted

Safety

Annealed (standard) or Laminated

Note

During the fusing process, air bubbles/pockets are trapped inside the glass, and will be visible through the finished product. This is common and acceptable. Many clients often request that we produce additional air bubbles; however, this is a random occurrence and beyond our control. Typically, the larger the panel size and the thicker the glass, the greater amount of air bubbles/pockets will form.
